

JADE Delivers

The JADE Technology is delivering proven results to over 2000 organizations worldwide

JADE is powering applications internationally, increasing productivity across a diverse range of industry sectors including Ports and Logistics, Education, Health, Agriculture, Insurance, Banking and Finance.

“Our evaluation process left us in no doubt that Jade had the best featured and most cost effective application for our institution. Furthermore, Jade had the best track record of the contenders of delivering what was required, to spec, on time and on budget. Our experience to date has left us very pleased that this assessment is correct.”

*Derek Postlewaight – IT Services Director,
University of Waikato*

“Getting the technology right is crucial for the building society’s 65,000 residential mortgage borrowers and 500,000 retail investors. The move to JADE on an open platform has taken us from a limited position, in terms of IT, to one of real flexibility and scope.”

*David Cutter – Operations Director,
Skipton Building Society*

“Our two reasons for moving to JADE have been fully realized - reduction in costs and a technology leap. Our equivalent running costs dropped by \$800,000, and we incorporate the technology leap daily.”

*Trevor Douglas – IT Manager,
Mitsubishi Motors NZ*

- The power of JADE enables the United Kingdom’s largest rail freight company, English Welsh and Scottish Railway, to move over 100 million tons of freight each year, running 8000 trains per week.
